# Wordana

About
Wordana

- Wordana is a wordle game that is built on the Lightlink blockchain network.

- The game makes use of the API 3 Quantum Random Number Generator protocol to whip up a collection of random words.

- Players then take their shot at guessing these words within a specified number of attempts.

- Thanks to Lightlink's gasless technology seamlessly integrated into Wordana, you get to experience all the wordle fun without the hassle of gas fees.

The Problem

- Many gamers and game developers avoid blockchain-based games due to high gas fees.

- Most blockchain-based games are too technical for newbies.

Our Solution

Wordana in a nutshell:

- Wordle game with single and multiplayer functions.

- Gasless gameplay using LightLink Enterprise Mode solution.

- Word randomisation using API 3 QNRG

- Secure smart contract deployed on the LightLink network and scanned with SolidityScan.

Future Roadmap

Q2 - 2024

- User experience review.
- Community building.
- Premium hosting of web version.

Q3 – 2024

- Multiplayer monetisation (earn percentage from every stake and use it to offset Lightlink Enterprise Mode monthly fee).
- Mobile app development.
- Mobile app beta version testing.

Q4 - 2024

- Mobile app launch.
- Airdrop
- User experience review based on feedbacks.
